Profession Summary

An accomplished Android developer with four years of personal experience, distinguished by a portfolio of apps published on Google Play (Account Terminated), over one million downloads in total. Renowned as a proficient freelancer, actively contributing to open-source initiatives. Possesses expert-level proficiency in both Kotlin and Java programming languages.

Projects

WanderStay – Hotel Booking App [open on github](#) Jan 2024 – Mar 2024

- The Hotel Booking App is an Android application designed to facilitate hotel reservations for users.
- It allows users to search for hotels, view available rooms, and make reservations seamlessly.
- Social login options via platforms like Google and Facebook are supported.
- Search functionality allows users to find hotels based on location (city or landmark).
- Filtering options like price range, star rating, and amenities help refine search results.
- Users can manage past and upcoming reservations.
- The app aims to provide a user-friendly interface and a smooth booking experience.

Libretube – Open-source contributions [open on github](#) Jan 2024 – Still Working

- It's an alternative frontend for YouTube developed in Kotlin, it has more than 7000 stars on GitHub and has a very large codebase.
- I had fixed many bugs in this app related to Room Database and Video Buffering.

Notes App [open on github](#) Jun 2023 – Jul 2023

- Local and Cloud Sync: Seamlessly synchronize notes across devices using local storage and cloud services.
- Create and Edit Notes: Easily create new notes or edit existing ones with a simple and intuitive interface.

Crypto Market App [open on github](#) Aug 2023 – Sep 2023

- Real-time Prices: Get up-to-date prices of more than 1000 cryptocurrencies.
- Coin Details: View essential information about each coin, such as market cap, volume, and price change.
